

A Targeted Digestive Enzyme for FODMAPs

FODZYME® fills a different role in your digestive enzyme toolkit. While pancreatic and broad-spectrum enzymes support general digestion, FODZYME® is specifically formulated to target fructans, GOS, and lactose – helping patients enjoy high FODMAP foods without the aftermath.*

When to recommend FODZYME®

For patients who experience digestive symptoms associated with foods containing:

 Wheat	 Onion	 Garlic
 Beans	 Legumes	 Dairy
 Brussels sprouts	 Artichoke	 Chickpeas

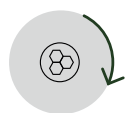

... and many more delicious and nutritious foods.

Unique and proprietary fructan hydrolase effectively breaks down fructans in garlic, onion, wheat, and more.*

Already using digestive enzymes?

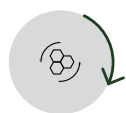

FODZYME® doesn't have to replace them. Its targeted enzyme blend can complement the digestive support you're already recommending by addressing specific FODMAPs.
